Customer Documentation Overview

2026-08-29

Chimera is a programmable infrastructure simulation engine for integration-testing migration, discovery, export, and automation software **without** provisioning real vSphere (or other planned personas).

The **Command Center** lives at `/__chimera/` on the same listener as the fake vCenter SDK.

Product at a glance

```
Command Center → http(s)://<host>:8989/ - chimera/
vSphere SDK    → http(s)://<host>:8989/sdk
Simulator login → administrator@vsphere.local / vmware
UI login        → admin / admin (change in Settings)
```

Chimera is a **test and compatibility appliance**. It is not VMware software and is not for production workloads.
